

Week 5: Evolution

Coloring Sheet

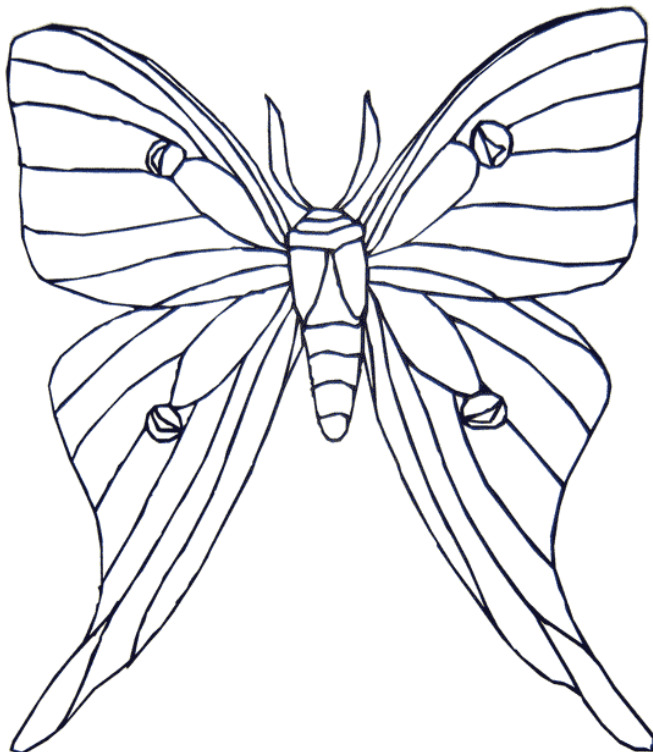

Evolution: change over time that causes new adaptations in an animal.

Adaptation: characteristic that helps an animal survive in its environment

These animals have been put into new environments and need to evolve to survive! You will need to fill in and/or color the pictures with new *adaptations* that the animal can use. There are some questions that may help guide you in creating your newly evolved animal!

Your environment is _____.

1. What colors are animals in this environment?
2. What kind of adaptations do animals here have?
3. What is the temperature like?
4. What do animals here eat?

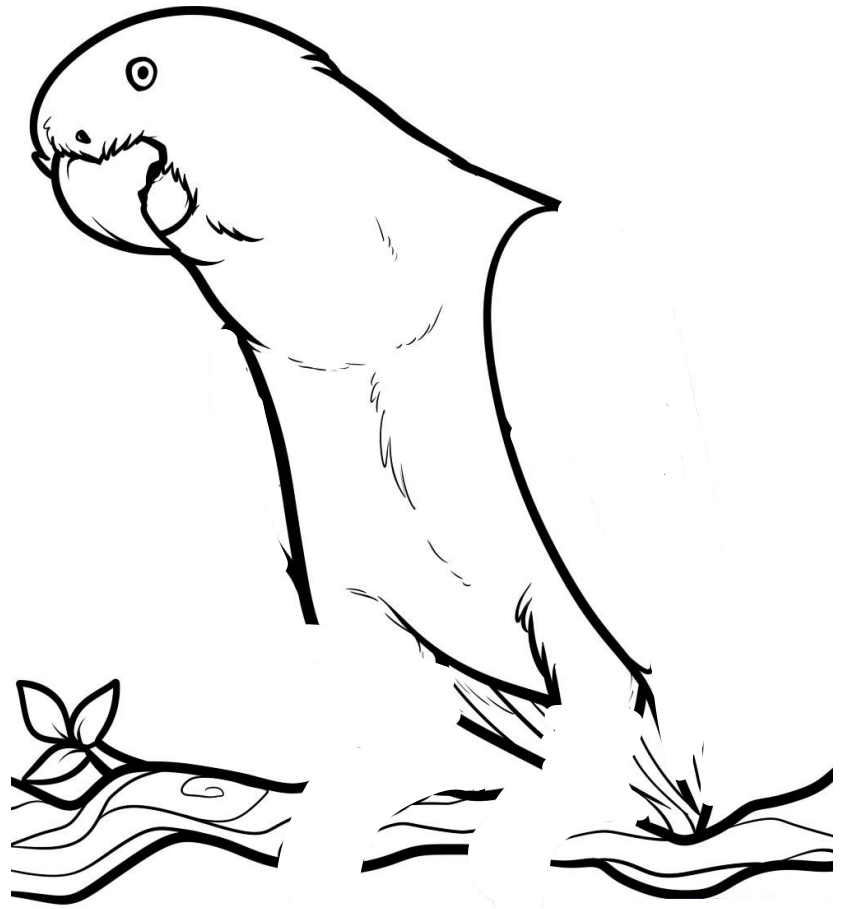

Moth

Moths use their colors to blend in. How might their color change in the environment you've been given?

Parrot

Parrots are very brightly colored and have large wings. They have small feet with sharp claws. How might these things change in their new environment?

Rabbit

Rabbits usually have long hairs and fluffy little “cotton” tails. How would these things grow or shrink in size to help them survive and adapt?
